
Card Counting?

Posted by rags2riches - 2008/10/13 14:25

Hi People,

I was watching the film 21 the other night which shows how a team do over a casino through card counting playing blackjack.

What they were doing looked complicated, but does any know of any blackjack methods that you can use and will help you win.

I love playing blackjack and would love to learn how to win more often.

:P

hi, r2r

I've not seen the film itself, however. It is possible to count cards but its's quite tricky, its all about percentages. There are more picture cards than any other card in the decks being used so you need to try and figure out when you are going to draw a picture.

hope this may help you a little.

Hi

Ive seen the film it looks very complicated to me as well, don't they have those machines that shuffle the cards every time they finish a hand now day's anyway, I'm sure they have them at my local casino.

BE B)

Hi,

I think they do at land casinos, how does it work online though. Does the computer program just select any card at random, or is it a pack of virtual cards, sorry if this question sound stupid?

Phil

Yup. it is possible. But don't get greedy. LOL.

It will take some people to do the for you though. 3-4 people and with good memory skills and very fast at things too.

But blackhat methods to win?

Here's mine.

- 1)Stand if you hold hard 12 to 16 and the dealer shows 2 to 6
- 2)Hit if you hold hard 12 to 16 and the dealer shows a 7 or higher
- 3) Stand on 17 to 21, but hit soft 17
- 4)Always split pairs of Aces and 8's
- 5)Never split 10's, jacks, queens, kings, 5's or 4's
- 6)Double down on 10 or 11 if dealer shows an 8 or lower

Make four consecutive bets at a betting level you're comfortable with, (usually the table minimum). Now, if you don't win at least two of the four hands dealt, simply try again a little later.

A winning blackjack strategy is to wait until you're ahead by two units, then use this progression: 2, 3, 5, 7, 10. If your betting unit is \$5, the progression would be: \$5, \$5, \$10, \$15, \$25, \$35, \$50. Even when you're playing winning blackjack every run of good luck will come to an end. When it does, go back to your original level. Anytime you lose four hands in a row, take a break for a while, no matter whether you're up or down for the session.

Hope that helped out?

Let me know if there is anything else I can do for you. I'm here to help not to waste your time. So take advantage!

Both.

It isn't any manipulation of computers. So it will work for both in either case.

On the other hand, a secret roulette strategy is way diff when online and offline. With roulette there's a secret way to

manipulate the online casinos, but only works with some casinos.

Roulette in real casinos though is pretty risky and caution be advised if your thinking of walking off with thousands.

There are some strategies that tell you to keep betting higher and higher till you win.- Worst advice.

You never bid higher in most cases until you have a win!

Hi All,

Card Counting at the Blackjack table can provide you a numerical betting benefit of 2% at the casino. If you know how to count cards in blackjack, you can get the information about the cards gone. And if you have the information about the cards gone before, your chances of winning improves.

Have a nice day.

Hi All,

Greeting for the day,

Most of the casino players, want to learn the skill of card counting in blackjack. In order to gain this skill, the player must know the structure, after understanding the structure, he should practice. It is quite tough to understand this calculation

system. If you want to win the game, you must know the tips as well.

Have a nice day.

Card counting is a casino card game strategy used primarily in the blackjack family of casino games to determine whether the next hand is likely to give a probable advantage to the player or to the dealer.:woohoo:
